

Hitachi Data Archiver Software

In today's atmosphere of heightened governmental regulatory requirements, data must be both securely archived and easily accessible. E-mail data, in some cases, must be retained and quickly accessible for years. If required, specific data must be turned over in minutes, not days. Hitachi Data Archiver software helps companies meet these demands by delivering unmatched data management and accessibility for archived Microsoft Exchange e-mail messages and attachments. Rich search and discovery advantages coupled with secure access provide a fail-safe way to retrieve data.

As part of the Hitachi Data Protection Suite of software, powered by CommVault®, Data Archiver software lowers risk and administrative costs. It uses state-of-the-art indexing and data movement capabilities to ensure that fixed data is protected against data alteration or loss.

With Data Archiver software, you can enforce policy-based actions across your entire archive so that data can be automatically retained, managed, and retrieved. Robust media management automates the storage process and allows for fast data retrieval. To add an extra level of protection, Data Archiver software provides disaster recovery redundancy with single or mixed media formats, minimizing costs.

Meet Regulatory Compliance and Legal Discovery Requirements

Data Archiver software delivers the data archival, search, and retrieval capabilities necessary to meet the increasing demand on organizations for consistent data retention and retrieval. This demand requires companies to meet government data retention regulations, such as SEC 17a-4 or HIPAA, as well as to establish policies that comply with laws

such as the Sarbanes-Oxley Act of 2002 or the New Basel Capital Accord (Basel II). With Data Archiver software, meeting these legal discovery or regulatory compliance requirements is simplified.

Through a reliable e-mail archiving process that regularly indexes and moves data to long-term archival storage media, Data Archiver software lets you easily preserve, search, and retrieve specific e-mail data upon request. Implementing a reliable archiving process helps reduce the risk of data loss or alteration due to corruption while minimizing the cost of managing and retrieving long-term data.

Easy Management and Administration

With a single, unified browser interface, Data Archiver software automates the Exchange data archival process. Authorized users can easily perform multifaceted full-text searches across the archive for e-mail messages and attachments. When an external request for data or audit materials comes in, the IT staff or an authorized business user can quickly deliver the copies. And, as compliance and risk management initiatives evolve, Data Archiver software can swiftly adjust to match new corporate guidelines. Through automated media management and verification, Data Archiver software lowers administrative costs and maximizes staff productivity.

Robust, Policy-based Lifecycle Management

With Data Archiver software, you can impose policy controls to enforce data retention rules that may span many years. Storage Policies enable you to easily manage multiple archive copies across tiered storage architectures to support your data lifecycle management and disaster recovery strategies. By implementing Data Archiver software processes to manage your data, you can be assured that your policies will be adhered to with minimal administrative efforts.

Meet Regulatory Requirements. Achieve Unmatched Data Management and Accessibility. We're at Your Service.

The Hitachi Data Systems Global Solution Services team can help you address your regulatory compliance needs through services that support Data Archiver software and other software from the Hitachi Business Continuity Solutions. These services assist you with configuration and basic control of Hitachi storage system-based data mirroring. They also help you support your data replication requirements, including backup and recovery, testing and development, business continuity, and disaster recovery.
