

Hitachi Data Archiver Software

Are you looking for increased performance or reduced costs in email and file system data management? You can achieve both with Hitachi Data Archiver software.

Better Storage Utilization, Lower Costs

Robust hierarchical storage management capabilities enable migration of Microsoft® Exchange messages (and attachments) or Microsoft Windows® File System data to less expensive secondary storage while retaining transparent user access to the migrated data through a Microsoft Outlook or centralized browser interface. The result? Better storage utilization and lower costs.

Efficient Storage Utilization

Data Archiver software — part of the Hitachi Data Protection Suite, powered by CommVault® — lets administrators use existing storage resources more intelligently. It migrates file system data on Windows or UNIX hosts or Exchange Server email messages and attachments to less expensive secondary storage. By shrinking the size of the Microsoft Exchange Information Store or Windows File System, Data Archiver software reduces backup windows, prevents over-capacity incidences, eases IT administrative

burdens and improves system performance. These capabilities all contribute to a lower total cost of ownership.

To ward off a storage capacity crisis, such as users hitting disk quota limits or email servers exhausting disk space, Data Archiver software lets administrators automatically manage disk or mailbox quotas. With Data Archiver software, quota interruptions are less frequent. Migrations can be automatically scheduled before thresholds are met, seamlessly extending the capacity of an individual user's disk volume or mailbox.

Data Archiver software makes more data available to more users and ensures that all data is managed.

Easy Email and File System Data Management and Administration

Through Data Archiver software's centralized browser interface, IT administrators easily meet operational requirements. Data Archiver software leverages the CommVault Common Technology Engine (CTE) to provide flexible

and robust retention schemes. Based on predetermined criteria, Data Archiver software automatically migrates messages or file system data and lets users recall the information when they need it. Users access migrated data the way they always have; no special user interface is needed.

Migrated data appears in the user's Outlook directory or the centralized Data Archiver browser interface with a special icon alerting users that the message, attachment or file has been migrated. Recalling migrated data is easy; users simply highlight the message or file and it is automatically recalled from storage. Or, administrators can use the Data Archiver browser interface to search attributes before recalling.

Administrators can meet corporate guidelines by easily recalling migrated files or messages. The entire file or message, including all properties and attachments, is recalled as it was when it was migrated.

Seamless Integration with Hitachi Backup and Recovery Software

Data Archiver software integrates tightly with Hitachi Backup and Recovery software for simplified and unified management of all copies of Exchange email and Windows or UNIX File System data. The integration dynamically shares storage resources between migration and backup.

Increase Performance and Reduce Costs of Email and File System Data Management. We're at Your Service.

The Hitachi Data Systems Global Solution Services team can help you address your email or file system data management and migration needs through services that support Data Archiver software and other software that is part of Business

Continuity Solutions from Hitachi Data Systems. These services assist you with configuration and basic control of Hitachi storage system-based data mirroring. They also help you support your data replication requirements, including backup and recovery, testing and development, business continuity and disaster recovery.
