

How to Apply the Latest Advances in Mainframe Storage

WebTech Q&A Session, Oct. 19, 2011

- 1. Please clarify Hitachi Universal Replicator (HUR) support with Hitachi Dynamic Provisioning (HDP).**
HUR supports any type of 3390-A volume combinations in a 1x1x1 configuration. Larger configurations with multiple VSP control units in each location (a.k.a. MxNxO) will be supported in 1Q2012.
- 2. Are there any other functions not supported when using Hitachi Dynamic Provisioning for Mainframe (such as HTSM migrations)?**
Current restrictions include FICON data migration and Cross-OS File Exchange. These 2 products do not support 3390-A emulation.
- 3. What RAID configurations are supported?**
All RAID5 and RAID6 configurations are supported, including external volumes. Support for RAID1 is planned in 1Q2012.
- 4. Are the new 7200-RPM SAS drives supported?**
Yes, NL-SAS drives are supported.
