

Evolve your business

HANA

Let us guide you into the future!

the HANA enablement package includes all needed resources for a faster enablement and business benefits AND comes at a fixed price

SAP HANA

Built on the most advanced in-memory platform today

Key benefits moving to HANA from a business perspective

SAP HANA creates unique opportunities to reinvent business models and drive new revenues and profits. First, enterprises can now easily connect to people, devices, and business networks to deliver new value to their customers on any channel – the Internet of Things and Big Data become accessible to any business. Second, enterprises can dramatically simplify their processes, drive them in real time and change them as needed to gain new efficiencies – no more batch processing is required. And finally, business users can now get any insight on any data from anywhere in real-time: planning, execution, prediction, and simulation – decisions may be made on the fly with a high level of granularity for faster business impact.

SAP HANA: Makes real-time business a reality

Real-time business becomes a reality with SAP HANA where in-memory processing gives more time for relatively slow updates to column data. The Columnar storage increases the amount of data that can be stored in limited memory (compared to disk). The Column databases enable an easier parallelization of queries, while the Optimized software enables a linear performance scaling making sophisticated calculations like allocations possible. In-memory allows for sophisticated calculations.

SAP Hosting @ intelligence

intelligence holds 10 data centres worldwide ready to host your next SAP solution. We have extensive knowledge of SAP HANA projects based on our collaboration with SAP on HANA deployments, through a total of 500 hosting customers and 50 productive customers using HANA, over 150 HANA installations in our data centres and expert knowledge in migration techniques with over 200 SAP HANA certified experts within consulting and hosting. We have a strong relationship with SAP in order to test and evaluate new features and products for SAP HANA.
