

Take Control of Unstructured Data With a Communication Governance Solution

Gain Visibility and Control of Application
Silos, Ensure Compliance

SOLUTION PROFILE

Implementing a compliance solution is a required cost of doing business, and your organization most likely already has a solution in place. However, new collaboration and communication tools and infiltration of user devices are challenging the competencies of compliance solutions. The extent to which data can remain secure, or that your solution can respond quickly to an e-discovery investigation and keep pace with changing requirements is often not addressed until a problem arises. Without the right infrastructure platform, completing a data query or investigation becomes a resource-intensive process. Indeed, a survey found that users waste 30 minutes per day searching for documents they need¹. Compliance teams often have to search across all of their silos separately, even turning to outside groups to help, exposing sensitive information, and potentially compromising the integrity of the investigation. Many times, this task is assigned to IT, pulling them away from their core responsibilities and leaves organizations scrambling to fill the void.

Data Compliance Solutions Tasked To Protect and Govern Are Constantly Changing

The effort and cost associated with completing an investigation can quickly become unsustainable. Furthermore, without a solution that enables easy adherence to best practices, investigation processes yield inconsistent results. Failure to respond to investigations properly can lead to serious consequences and large fines. Organizations need an [object storage](#) solution that will allow them to keep pace with regulatory compliance demands, adapt to relevant technological innovations, and exercise greater governance and control over data.

There are three key elements to establishing control of your unstructured data with a communication governance solution. Hitachi Content Platform keeps data protected, accessible and ready to answer compliance challenges.

Hitachi Content Platform (HCP) Delivers the Ideal Foundation for Solving the Communication Governance Puzzle

With HCP as the foundation for a communication governance solution, you can consolidate data from application silos. Built-in metadata query capabilities allow searches across all data, without leveraging IT resources. Respond to queries and investigations quickly while protecting the integrity of your search. Make sensitive data immutable and auditable. Define your own data access and retention policies and eliminate the regulatory compliance burden.

Beyond compliance and governance, HCP provides the ideal ecosystem to support existing content-centric applications and contemporary cloud workloads, simultaneously. HCP's flexible and adaptable architecture supports traditional applications. It serves as the repository for newer Web 2.0, Amazon S3-enabled cloud, big data, mobile sync and share, remote and branch office, file and open source application data, all from a single point of management.

Hitachi Content Platform Brings Key Benefits to Communication Governance

Eliminate Communication Silos

Consolidate data from all communication applications, such as voice, email, instant messaging and more. Search across all data simultaneously and expeditiously, saving your compliance team countless hours.

Respond to investigations faster.

Be Future-Ready

HCP has broad set of protocols to support integration of third-party, cloud and custom applications with a centrally governed and managed storage repository that supports lines of business, IT and regulatory needs.

Enable your data for a digital transformation.

Communication Governance Solution

- Consolidate data across all of your application silos to exercise greater visibility and control.
- Empower your compliance teams to search across all data, to respond to queries, audits and investigations quickly, and avoid costly financial penalties.
- Offload IT and other nonessential groups from legal searches and investigations, and protect the integrity of your data sets.

Ready your IT environment for a digital transformation. Lay the foundation to deploy cloud, data mobility and more.

Protect the Integrity of Your Data

HCP offers a rich set of features to make sensitive data tamperproof with “write once, read many” (WORM) functionality, along with encryption based on an algorithm approved by the U.S. National Security Agency.

Keep your data ready.

Visibility and Control Over All Data, No Matter Where It Lives

With HCP, you can maintain visibility and control over all of your data, both on-site and in the cloud.

Know your data is always in the right place at the right time.

Empower Secure Mobility

The HCP portfolio also delivers a secure way to synchronize, share and protect user data while driving greater collaboration and employee productivity.

Work from anywhere, anytime, and from any device.

Rabobank Entrusts HCP To Manage Compliance Requirements

To centralize its application information under one roof, Rabobank turned to Hitachi Vantara to build a cutting-edge ingest-and-search platform based on Hitachi Content Platform. This solution automates collation, security and indexing of both structured and unstructured data from across the business.

- Deploy a single, central and secure repository for communications data from multiple sources.
- Rely upon an immutable data source that is fully auditable.
- Execute compliance investigations rapidly and securely, across global business units.

The regulatory landscape is constantly shifting. Hitachi Content Platform enables compliance investigations to be completed rapidly and securely, across global business units. Most importantly, HCP gives Rabobank control of its data, with a flexible, comprehensive solution and the ability to meet future compliance needs.
